

LED Control

Model Number: CLED

Product Description:

The CLED light controller uses multi-function DMX control interface cards capable of independently controlling up to fifteen Lumen Series light fixtures. This Controller can be used as a stand-alone unit to run “limited” lighting shows by manually selecting the modes with the built-in selector switches. These on-board controls provide for simple color fades, strobe effects, and color chases between fixtures. The Controller may also be interfaced with a DMX console or PC based controller to provide virtually limitless control of the lights, producing “real-time” shows as directed by one of these systems.

Our controller cards accept the DMX-512 protocol widely used in the entertainment industry.

*Fountain People, Inc. offer full programming service.
